 Website: [www.springgardentwp.org](http://www.springgardentwp.org)

THE DEPTH AND LOCATION OF UNDERGROUND SANITARY SEWER LATERALS OR CONNECTORS IS **NOT** GUARANTEED. While every effort has been made to ascertain locations and to keep accurate records, there have been instances where the records were twenty feet, or more, in error due to a lot line or street changes, fill or excavation surface changes or other reasons.

All persons seeking to connect to the sewer system are advised to open a test trench or pit at the expected lateral and (ordinarily at the street edge behind the curb) before performing excavation. The purpose of the test pit is to ascertain the exact location of the lateral connection point. **STARTING EXCAVATION AT THE BUILDING AND DIGGING TOWARD THE STREET IN HOPES OF FINDING THE LATERAL IS NOT ADVISED.** The Township of Spring Garden and its Engineer will **NOT** be liable for any expenses or damages resulting from a failure to comply with the above procedure.

We acknowledge that we have read and understand the foregoing, and understand that the location of sewer laterals is **NOT** guaranteed and must be verified by test pits dug in the field at property owner expense.
